

d) 444.4 m grid-point spacing

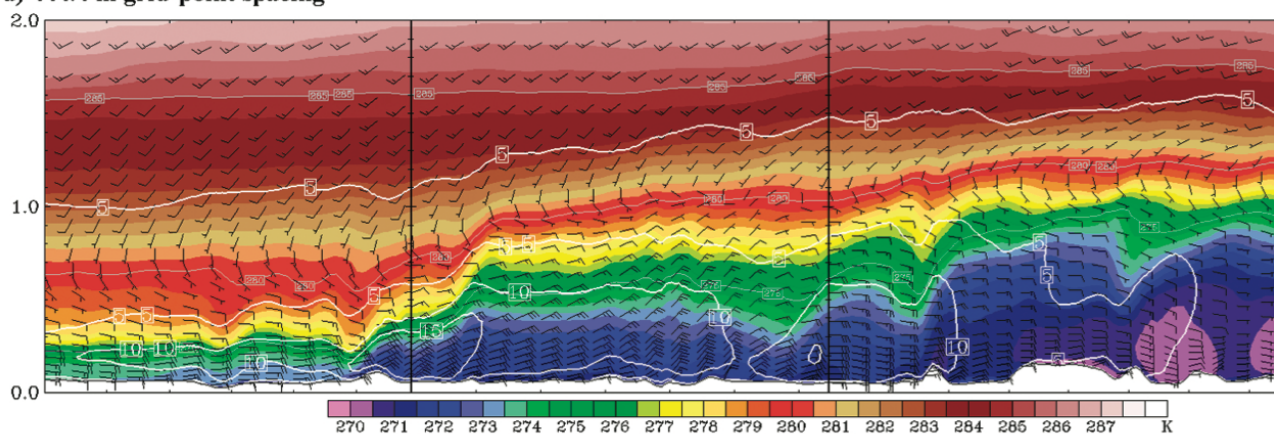

FIG. 8. Cross sections at 2100 UTC 13 Dec (forecast hour 2100) of potential temperature (color filled and labeled every 5 K) and wind field (full flag represents 5 m s⁻¹, with isotachs also plotted in white every 5 m s⁻¹). The cross sections follow the river through the lowest part of the gorge and compare output from successively higher-resolution domains.
