

Cloud Identification

Make observations of the clouds at your location on 10 different days. Use the table below. Record time and location of your observation. Indicate the type and amount of low, middle, and high cloud. Express amount in estimated tenths of the celestial dome covered by cloud.

For at least 2 days, provide a labeled photograph showing the clouds in your observation. For 1 day, provide a satellite picture, and write a brief comment on how the clouds look in the satellite picture (i.e. from above) compared to how they looked to you (from below).
